

We are looking for a

Working Student (m/f/x) (up to 20h/week) *OR*
Intern (m/f/x) (3-6 months full-time)

for **Embedded Software Development**

Munich, Germany

Join our team to develop new and improve existing embedded software for our rapidly growing fleet of project aircraft!

Your tasks could be:

- Co-operation in planning and implementation of embedded software, starting from drivers up to application level
- Support in commissioning of new embedded hardware platforms and prototypes
- Development and definition of communication interfaces / protocols for reliable data transmission
- Setup of toolchains and software development environments
- Planning and execution of software/hardware tests as well as other verification steps
- Documentation of development and verification results

Your skills and profile:

- You are enrolled in computer engineering, electrical engineering, mechanical engineering, or a similar course of studies (third year Bachelor or higher, Master)
- You have previous experience and/or special interest in (embedded) software development with C, C++, Python or other
- You are technophile, eager to learn and to prove yourself in projects in addition to your studies
- Previous experience in the aerospace industry is a plus!

What we offer:

We offer an exciting, varied and challenging environment in a young and international start-up. At Amazilia you can work independently and with a high degree of responsibility. To ensure the compatibility of your studies with the job, we are flexible in terms of your working hours. And of course, we offer an attractive salary and a nice office in the heart of Munich!

About Amazilia Aerospace:

Located in the heart of Munich, Amazilia Aerospace provides customized flight control system solutions for new aircraft designs, novel configurations and retrofit installations. Passion for aviation is at the heart of our company. We are continuously moving forward, innovating together with our national and international customers and partners. Our range of aircraft application spans from 600kg UAVs to turboprop and jet aircraft.
